

Session 27

1. Pick any one app you use daily (like Zomato, Instagram, or Paytm) and write a short summary of its main features and what you think the business requirements are for that app.

1. App Overview – Zomato

App Selected: Zomato

Main Features:

- User registration and login
- Search for restaurants and food items
- View restaurant menus
- Add food items to cart
- Apply coupons/offers
- Online payment
- Order confirmation and tracking
- Order history
- Ratings and reviews

Business Requirements:

1. Users should be able to create an account and log in securely.
2. Users should be able to search for restaurants and food items.
3. Users should be able to add food items to the cart.
4. Users should be able to place orders successfully.
5. Users should be able to make online payments securely.
6. Users should be able to track their orders.
7. The system should show correct prices, offers, taxes, and delivery charges.

**2. For the app you chose, create a test plan document that lists the testing objectives, scope, resources needed, and a rough timeline for manual testing.

Hint: Focus on 2-3 key features such as login, search, or payment.**

Test Plan – Zomato

Test Plan

Item	Details
Application	Zomato
Testing Type	Manual Testing
Testing Objective	Check whether important Zomato features work correctly
Features in Scope	Login, Restaurant Search, Food Ordering
Features Out of Scope	Backend, server performance, source code testing
Testing Approach	Functional, UI, positive and negative testing
Resources Needed	Tester, mobile/PC, internet, test account
Test Data	Valid/invalid login details, restaurant names, food items
Expected Result	Features should work according to requirements
Defect Tracking	Defects will be recorded with severity and steps
Timeline	3 days

Rough Timeline

Day	Activity
Day 1	Login and restaurant search testing
Day 2	Food selection, cart and order testing
Day 3	Retesting bugs and preparing final report

3. Write 5 test scenarios and 8 detailed test cases (with steps, expected results, and test data) for a core feature of your selected app, such as placing a food order, sending a message, or making a payment.

Test Scenarios and Test Cases

Core Feature Selected: Placing a Food Order

A. 5 Test Scenarios

Scenario ID	Test Scenario
TS01	Verify that a user can search for a restaurant
TS02	Verify that a user can select a food item
TS03	Verify that a user can add food to the cart
TS04	Verify that the user can place an order
TS05	Verify that the user receives order confirmation

B. 8 Detailed Test Cases

TC ID	Test Case	Steps	Test Data	Expected Result
TC01	Search restaurant	1. Open Zomato 2. Enter restaurant name 3. Tap Search	"Domino's"	Matching restaurants should be displayed
TC02	Search unavailable restaurant	1. Open Search 2. Enter random restaurant name 3. Search	"XYZ Food 999"	Proper "No results found" message should appear
TC03	Open restaurant menu	1. Search restaurant 2. Select restaurant	Domino's	Restaurant menu should be displayed
TC04	Add food item to cart	1. Open restaurant 2. Select food 3. Tap Add	Veg Pizza	Item should be added to cart
TC05	Increase food quantity	1. Open cart 2. Increase quantity from 1 to 2	Quantity = 2	Quantity and total price should update correctly
TC06	Remove food from cart	1. Open cart 2. Select Remove	Veg Pizza	Item should be removed from cart
TC07	Place order	1. Add food 2. Open cart 3. Enter/select address 4. Continue to payment	Address: Ahmedabad	User should reach payment/order confirmation process

TC08	Order confirmation	1. Complete a successful test payment 2. Check order status	Test payment	Order confirmation should be displayed with order details
------	--------------------	--	--------------	---

**4. Create a simple Requirement Traceability Matrix (RTM) mapping at least 3 requirements from your app to the test cases you wrote.

Hint: Use a table format: Requirement ID, Description, Test Case IDs.**

Requirement Traceability Matrix (RTM)

Requirement ID	Requirement Description	Test Case IDs
REQ-01	User should be able to search for restaurants	TC01, TC02
REQ-02	User should be able to view restaurant menu	TC03
REQ-03	User should be able to add/remove food from cart	TC04, TC05, TC06
REQ-04	User should be able to place an order	TC07
REQ-05	User should receive order confirmation after successful order	TC08

RTM Purpose: RTM helps us check that every requirement has at least one test case.

5. Imagine you executed your test cases and found 2 bugs. Write defect reports for both, including steps to reproduce, expected vs actual results, and severity. Then, prepare a brief final test report summarizing your testing process and results.

Defect Reports

Defect 1 – Cart Total Not Updated

Defect ID: BUG-001

Title: Cart total does not update when food quantity is increased

Module: Cart

Severity: Medium

Priority: High

Status: Open

Steps to Reproduce:

1. Open Zomato.
2. Select a restaurant.
3. Add one food item to the cart.
4. Open the cart.
5. Increase quantity from 1 to 2.

Expected Result:

The total price should increase according to the new quantity.

Actual Result:

The quantity changes to 2, but the total price still shows the price for 1 item.

Defect 2 – Order Confirmation Missing

Defect ID: BUG-002

Title: Order confirmation message is not displayed after successful payment

Module: Order/Payment

Severity: High

Priority: High

Status: Open

Steps to Reproduce:

1. Open Zomato.
2. Select a restaurant.
3. Add a food item to the cart.
4. Select delivery address.
5. Proceed to payment.
6. Complete the payment successfully.

Expected Result:

The application should display an order confirmation with order ID and order details.

Actual Result:

Payment is successful, but the order confirmation screen is not displayed.

Final Test Report

Project: Zomato Manual Testing

Testing Type: Manual Functional Testing

Features Tested: Restaurant Search, Menu, Cart, Food Ordering and Payment

Test Execution Summary

Item	Result
Total Test Cases	8
Passed	6
Failed	2
Defects Found	2
High Severity Defects	1
Medium Severity Defects	1
